PASSAP E8000 Software

Creation8- From PASSAP - A stitch design programme that will run in DOS. Will run on any IBM compatible computer from DOS ver 3 upwards therefore does not require Windows.

DesignaKnit 6 for Windows is a powerful CAD / CAM program for designing knitwear.
http://web.archive.org/web/20020928130751/http://www.softbyte.co.uk/Dk6.htm

The program includes:

Standard Garment Styler. This is a versatile pattern-drafting tool to create garments from a range of standard shapes. Optionally use standard sizes for men, women, children, and babies. Edit any or all of the body measurements for a perfect fit, and save personal size data in a database.

Original Pattern Drafter. This is for designing garments from scratch. Each garment piece can be adjusted in size, shape, and layout, or cut into panels or joined with other pieces, working with tape measures and grids.

Stitch Designer. This is for designing multicoloured and textured stitch patterns, and for integrating these with garment shapes. It supports colour changers, graphics tablets, Jacquard knitting, and using the appropriate cable link, downloads stitch patterns to electronic knitting machines. A wide range of printouts are available.

Interactive Knitting. This is the ultimate shaping and pattern control tool: link any machine to the computer via the appropriate link to follow row by row all the instructions for colour changing and shaping.
